Strengths

Analytical Skills

Strong problem-solving and critical thinking abilities.

Leadership Quality

Capable of managing tasks and guiding team members.

Adaptability

Quickly adjusts to new technologies and environments.

Learning Agility

Passionate about learning and applying new concepts.

Certification

Graphic Designing Course

Hope Academy, HITEC University

Languages

Urdu

Native

English

Professional

Career Objective

To contribute effectively to the success and growth of an organization by utilizing my technical knowledge, problem-solving abilities, creativity, and dedication. I aim to continuously enhance my software development, programming, and design skills through practical experience and challenging projects. My goal is to learn emerging technologies, work collaboratively in professional environments, and develop innovative solutions that create value for both the organization and society while achieving long-term professional growth.

Education

Bachelor of Science in Software Engineering

HITEC University Taxila

2024 – Present

CGPA: 3.09 / 4.00

Core Courses

Data Structures & Algorithms (DSA)

Understanding of efficient data organization, algorithm design, optimization techniques, and problem-solving approaches.

Object-Oriented Programming (OOP)

Knowledge of Encapsulation, Inheritance, Polymorphism, and Abstraction for developing reusable software systems.

Web Development

Experience in creating responsive websites using HTML, CSS, JavaScript, and modern web technologies.

Software Engineering Principles

Understanding of software development lifecycle, testing, maintenance, documentation, and quality assurance.

Artificial Intelligence

Knowledge of AI fundamentals, intelligent systems, and machine learning concepts.

Key Projects

Food Delivery Website (HTML/CSS)

Designed and developed a responsive food delivery website using HTML and CSS. The project included attractive user interface design, food categories, navigation menus, promotional sections, and mobile-friendly layouts for a better user experience.

Library Management System (Java)

Developed a Java-based library management system to manage books, students, issue records, and return operations efficiently while reducing manual record handling.

Smart Electricity Billing System (Python)

Built a Python application for electricity consumption tracking and bill estimation. The system automates calculations and helps users monitor electricity expenses accurately.

Smart Railway Gate Control System (Java)

Created an automated railway gate control system using Java concepts to improve safety by simulating train detection and automatic gate operations.
